

Next Generation...

FDL Generators announces the arrival of the latest combination of standby generator and UPS system:

Power+
the second generation

Feel secure with a combined generator / UPS system from FDL

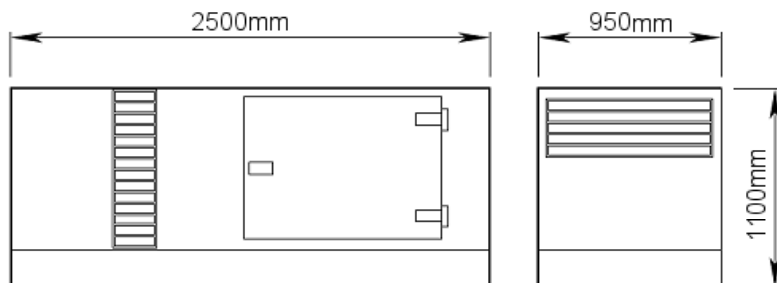

FDL have produced a range of combined emergency generator / UPS's specifically designed for remote location with remote monitoring.

The equipment comes totally automatic as standard and can be positioned either in or outside. Outside units have acoustic hoods, with bases, hinges, louvres and door furniture made of **stainless steel**, making them particularly suitable for noise sensitive areas and harsh environments.

Combined internal fuel tank will run the machine for at least 24 hours, depending on load.

Dimensions shown are for a typical 10kVA unit.
Other sizes are available.

All units are built to order and offer easy maintenance.

FDL Generators - There when you need us.
